

Project Title: 2013 College Football Statistics

Problem/Domain: Securely store and view data about college football in the year 2013, including players, teams, games, and their relationships with each other.

Solution Proposal:

Our web pages will allow the viewer to display:

Top 5 Yards Per Game (QB/RB/WR/TE)

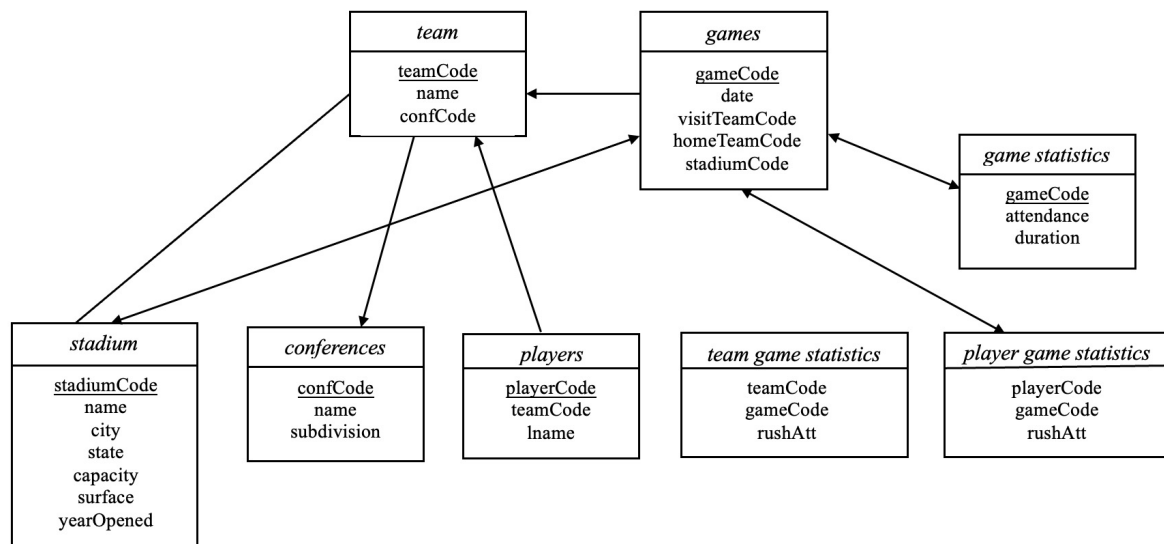

Defensive Line Efficiency (Stats divided by games played)

Average # of wins per conference

UGA's top performers (top players of each position)

As well as an interactive element, allowing them to add/remove players & update stats.

Preliminary Entity-Relationship Diagram:

Technologies: We plan to use Java with Mustache, as we have used in previous projects.
